

# Moisture Manager

## Professional root zone moisture management

When you have thousands of dollars in landscaping materials, labor and costs are at risk, minimizing drought related plant stress is crucial to the success of your landscape. When you have hundreds of dollars spent in water bills just trying to keep the investment you have made on your landscape is crucial. Drought stress is a year -long problem. Applying more water sometimes is not an option financially or legally. Water restrictions are becoming more and more the standard and violating water restriction ordinances can also be costly. Properly managing water usage reduces your water expenses by 50% or more. Moisture manager is a safe and environmentally responsible way of reducing drought stress to your landscape, enhance nutrient efficiency, optimize pesticide efficiency and reduce water expenses!

Moisture manager is a proprietary blend of hydrosorbent technology combined with an advanced naturally derived soil surfactant for improved penetration. Moisture manager is designed to manage soil moisture in between irrigation or rainfall. Mostly made of food grade ingredients and natural plant extracts it is non toxic and causes no harm to your pets and plants.
